Notes and explanations.

In cases of doubt please contact your local BILSTEIN dealer or our sales department before conversion.

BILSTEIN shock absorbers must always be replaced in pairs. The conversion requires special tools and expert knowledge. Therefore, converting your vehicle to BILSTEIN must be carried out by a specialist workshop. Use a chassis hoist for the fitting so that the raised vehicle cannot slip. If a chassis hoist is not available, you must ensure that the vehicle is blocked against any movement when it is raised. Under no circumstances should any work be completed underneath the vehicle if it is not adequately secured. Otherwise, there is a risk of extremely serious head injuries and contusions.

The application must be in accordance with the BILSTEIN type list, otherwise the proper function of the BILSTEIN gas pressure shock absorber is no longer guaranteed. The same goes for clamping a shock absorber in a vice or any similar tool.

Under no circumstances may this BILSTEIN gas pressure shock absorber be modified in any way, otherwise all warranty claims and the type homologation will be rendered invalid. The oil fill in a BILSTEIN gas pressure shock absorber is pretensioned with gas.

Opening or heating the shock absorber in contravention of this instruction can result in severe injuries to the hands and face. Do not use impact drivers for unscrewing and tightening the nuts, otherwise the fastening thread will be irreparably damaged.

Self-locking nuts are only allowed to be used once! Suspension springs are pretensioned! For safety reasons, the suspension spring must be pretensioned with the help of an appropriate spring tensioning device. The top mount is only to be removed when the spring is preloaded sufficiently so it can be moved by hand. Severe injuries to the head or upper body may occur if these warnings are disregarded.

All fixing mounts for struts must be tightened before the vehicle is let down to the ground. Ensure that the bump stop and dust cover are correctly and properly fastened.

Re-use any original equipment parts only if they are in good condition, otherwise replace them with new ones. Never remove the thin film of oil on the piston rod and seal. After the conversion, check and/or adjust the track and camber and, if necessary, the brake power control (load-dependent) and ABS sensors according to the manufacturer's data. Also check and adjust the headlight setting if necessary.

Observe the rules specified in the type list when disposing of old parts. If you have any questions about this, please contact our sales department or, for Germany only, PARTSLIFE GmbH.

General information BILSTEIN B12 – B16

It is essential to observe the instructions in the expert report and in the installation instructions for chassis before installation. When chassis have a parts report, correct installation of the parts must be confirmed by an expert (TÜV, DEKRA, motor vehicle expert). The specified lowering dimension depends on the engine and equipment of the vehicle, and cannot be guaranteed. The specified lowering data result from the parts report. In the case of threaded suspension systems, the lowest permitted spring collar position must be set for acceptance in accordance with section 19 of the German Road Traffic Regulations. Spring collar positions outside the standard adjustment range must be presented for repeat acceptance by the official body (e.g. TÜV) in accordance with section 21 of the German Road Traffic Regulations. The report must be used as the basis for checking whether, and for which wheel/tyre combinations, it is necessary to have spacer discs.

Disposal of used parts BILSTEIN gas pressure shock absorbers

BILSTEIN mono-tube and twin-tube shock absorbers should not simply be thrown away. According to accident prevention and environment regulations, it is absolutely essential to depressurise the shock absorber and properly dispose of its content and its individual parts (danger of explosion when heating over 200°C). Safety glasses according to DIN standard 58211 part 2 – as used when grinding – are to be worn in accordance with the following disposal procedures.

Disposal:

Illustrations 1-3: BILSTEIN mono-tube gas pressure shock absorbers with a piston rod diameter of 8-14 mm (remove mounting parts, protective tube and dirt shield) are to be fixed on a suitable base, e.g. in a prism and centre marked at the 3 points to be drilled according to drawing no. 1. First of all, holes are to be drilled in the shock absorber close to the shock absorber base (c) with a 5 mm drill bit so that the hydrogen gas (pressure up to 25 bar) can escape. Two holes are now to be drilled at distance (d) in order to enable oil drainage. Proceed in the same manner when dismantling BILSTEIN mono-tube struts according to drawing no. 2. First of all, remove the outer tube. Saw off the tube above the mount (a) (fixture, axle stub, clip) but not the piston rod. Remove burrs from the separated parts. Remove tube by pulling it over the chrome-plated tube. Proceed in the same manner with BILSTEIN cartridge inserts according to drawing no. 3. First of all, remove outer tube. Grip the tube at point (b), turn (stud pointing downwards) and knock heavily against a hard base until the tube falls out of the tube bottom. Remove tube by pulling it over the chrome-plated tube. The details listed in the drawings are to be strictly adhered to.

Illustration 4: BILSTEIN twin-tube gas pressure shock absorbers with a piston rod diameter of 20-24 mm (remove mounting parts, protective tube and dirt shield) are to be fixed on a suitable base, e.g. in a prism and centre marked at the 2 points to be drilled according to drawing no. 4. First of all, drill a hole in the shock absorber close to the piston rod seal with a 5 mm drill bit so that the hydrogen gas can escape (e), then drill a 15 mm deep hole at the point stated (f) (80 mm from bottom of the tube with the piston rod in the extended position) in order to enable oil drainage. By repeated movement of the piston rod the oil is pumped out of the damper tube and collected in an appropriate container. The shock absorber oil, free from PCB and PCT, is to be disposed of in accordance with national waste disposal laws (same regulations apply to motor oil). After the shock absorbers have been depressurised and the oil drained off, shock absorber struts, cartridge inserts and their individual parts – still partly covered with oil and grease – must also be disposed of in accordance with the national waste disposal laws. This information has been provided in good faith, subject to the applicable regulations. We cannot accept liability for each individual circumstance.
